DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-4, 6, 7 and 9 are rejected under 35 U.S.C. 102(a) as being anticipated by Lee et al..

Lee et al. discloses a method of reading the data content of a non-volatile memory storage unit having all the steps as recited in claims 1-4, 6, 7 and 9 as follows:

- applying a set of sense voltage waveforms (voltages applied to the control gate, the drain and the source) to the terminals of the memory storage unit during a read interval;
- measuring a parameter value (column 1, lines 31-38);
- applying an episodic stimulus (low number of large magnitude jump-like voltage changes, Abstract, lines 3-5) to the memory storage unit during the read interval, wherein the level of stimulus affects the parameter value and whereby the contribution of noise component is reduced (Abstract).

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2818

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 29-32, 34, 35, 37-43, 51, 53-57 and 59-62 are rejected under 35

U.S.C. 102(b) as being anticipated by Dunlap et al..

Dunlap et al. discloses a method of operating a non-volatile memory having all the steps as recited in claims 29-32, 34, 35, 37-43, 51, 53-57 and 59-62 as follows:

- applying a set of voltages (voltages to control gate, source line and bit line, column 4, line 60 to column 5, line 16) a storage unit (column 4, lines 32-42) of the non-volatile memory during an interval (read operation);
- determining the conduction characteristics of the storage unit in response to the set of voltages (column 5, lines 15-16), wherein the set of voltages includes an episodic stimulus component.

The control gate voltage is considered an episodic stimulus component because it is ramped up or down (a time varying voltage).

Allowable Subject Matter

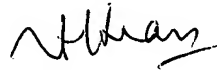

5. Claims 5, 8, 10-28, 33, 36, 44-50, 52, 58 and 63-70 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 5, 8, 10-28, 33, 36, 44-50, 52, 58 and 63-70 recite various features that are not found in the prior art.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huan Hoang whose telephone number is (571) 272-1779. The examiner can normally be reached on Mon-Fri 8:30AM-5:00PM.
